INFORMATION SYSTEM MANAGEMENT

**IMS566 - ADVANCED WEB DESIGN DEVELOPMENT AND
CONTENT MANAGEMENT**

**GROUP ASSIGNMENT:
SYSTEM DEVELOPMENT - LIBRARY EVENT REGISTRATION SYSTEM**

BACHELOR'S DEGREE IN INFORMATION SYSTEM MANAGEMENT

NCIMBSF7A

PREPARED FOR:

DR. MUHAMMAD ASYRAF BIN WAHI ANUAR

PREPARED BY

MOHD FAIZAL BIN SAWARDI LUKMAN - 2023183251

MUHAMAD AMIR IZZAT BIN SUDIN (2023717417)

ACKNOWLEDGEMENT

We would like to express our sincere appreciation to our IMS566 lecturer for the guidance, feedback, and support given throughout the development of this project. The advice and direction provided helped us understand the requirements of advanced web design, content management, database interaction, and system documentation more clearly.

We would also like to thank all group members for their cooperation, commitment, and contributions in completing the Library Event Registration System. Each member played an important role in planning the system, designing the database, developing the web application, preparing the documentation, and reviewing the final output to ensure that the project meets the required standards.

Finally, we are grateful for the learning experience gained through this assignment. This project has improved our practical understanding of web application development, teamwork, problem solving, and user-focused system design. We hope that the completed system can demonstrate our effort and knowledge in applying the concepts learned in **IMS566 - ADVANCED WEB DESIGN DEVELOPMENT AND CONTENT MANAGEMENT**

1.0 INTRODUCTION

The swift progression of web technologies has fundamentally changed how organizations handle administrative tasks, particularly event coordination and participant registration. Conventional paper-based registration approaches are typically inefficient, necessitating substantial manual effort to capture attendee data, confirm presence, and generate reports. These manual procedures are highly vulnerable to human error, data redundancy, and slow information retrieval, particularly during large-scale events. As libraries frequently coordinate academic programs, workshops, seminars, and user outreach efforts, there is an escalating necessity for a digital platform capable of simplifying event management while boosting operational productivity and data precision.

The **Library Event Registration System (LERS)** was developed as a web-based application to address these challenges by providing an integrated platform for managing library events from registration to attendance tracking. The system enables administrators to create and publish events, generate unique registration links, monitor participant registrations, update participant information, record attendance, perform keyword-based searches, and generate attendance reports in PDF format. Built using **CodeIgniter 4**, **MySQL**, **Bootstrap 5**, and **DomPDF**, LERS adopts a database-driven architecture that supports responsive user interfaces, secure authentication, and efficient data management across different devices. These features contribute to a more organised, accurate, and user-friendly event administration process.

This project was undertaken as part of the **IMS566 – Advanced Web Design Development and Content Management** course, with the objective of applying theoretical knowledge into a practical web application. Throughout the development process, the project incorporated essential web development concepts such as database design, authentication, CRUD operations, responsive interface design, content management, search and filtering functions, and PDF report generation. By integrating these technologies into a complete working system, LERS demonstrates the practical implementation of modern web development practices while fulfilling the learning outcomes of the course. The project also highlights the importance of digital transformation in enhancing library service management through an efficient, scalable, and maintainable web-based solution.

2.0 SYSTEM REQUIREMENTS

The **Library Event Registration System (LERS)** was developed using a combination of modern web technologies to ensure that the system is reliable, secure, and easy to maintain. The application is built with **PHP 8.1 or later** using the **CodeIgniter 4** framework, which provides a structured environment for developing dynamic web applications. **MySQL** is used as the database management system to store and manage information related to users, events, participants, and attendance records. On the front end, **Bootstrap 5** is implemented to create a clean, responsive, and user-friendly interface that works well on different devices and screen sizes.

In addition to the core technologies, **DomPDF** is integrated into the system to generate attendance reports in PDF format, allowing administrators to download and print reports easily. The system is designed to run on a web server that supports PHP and MySQL, and it is recommended to be accessed using **Google Chrome** or other modern web browsers for the best performance and compatibility. By combining these technologies, LERS delivers a stable, responsive, and database-driven web application that fulfils the functional requirements of the IMS566 project while providing a smooth experience for both administrators and participants.

Bil.	Requirement	Details
1.	Programming Language	PHP 8.1 or newer. Live server verified with PHP 8.4.22
2.	Framework	CodeIgniter 4.7.3
3.	Database	MySQL
4.	Frontend Framework	Bootstrap 5
5.	PDF Library	DomPDF
6.	Recommended Browser	Google Chrome
7	Draw ERD	https://drive.google.com/file/d/1kTDqIMw2iVCZlnVYVflgdYGkhnq2Zid4/view?usp=sharing
7.	Server URL	https://ptarapps.uitm.edu.my/ims566_group
8.	GitHub Repositories	https://github.com/pejalmfsl/ims566_group.git

3.0 ENTITY RELATIONSHIP DIAGRAM

The **Entity Relationship Diagram (ERD)** explains how the main data in the **Library Event Registration System (LERS)** is organised and connected. In this system, there are four main entities, which are **users**, **events**, **registrations**, and **attendance**. The **users** entity stores administrator information such as login details and user role. The **events** entity keeps all event details, including event name, date, status, and registration token. This allows the system to manage each library event in a more structured way.

The **registrations** entity stores participant information submitted through the online registration form, such as name, student or staff ID, contact details, faculty, and programme. Each registration record is linked to a specific event, meaning one event can have many participants. The **attendance** entity records whether each participant is marked as **Present** or **Absent** during the event. Overall, the ERD helps show the relationship between events, participants, and attendance records, making the database easier to understand, manage, and maintain.

Bil	Entity	Purpose
1.	users	Stores administrator accounts, login credentials, and role
2.	events	Store events details, event status, and generated registration token
3.	registrations	Stores participant registration, contact details, and attendance status
4.	attendance	Optional table for attendance linkage between events and registrations

4.0 USER INTERFACE OVERVIEW

The user interface of the **Library Event Registration System (LERS)** was designed with a strong emphasis on usability, consistency, and accessibility. The application utilises **Bootstrap 5** as its front-end framework to provide a clean and modern interface through a collection of pre-built components, including navigation bars, cards, responsive tables, forms, alerts, buttons, and badges. These components create a structured layout that allows users to navigate between different modules with ease while maintaining a consistent visual appearance throughout the system. Clear typography, organised content placement, and intuitive controls further enhance the overall user experience by reducing the learning curve for both administrators and participants.

In addition, the interface follows a responsive design approach to ensure compatibility across multiple screen sizes and devices. Whether accessed from a desktop computer, laptop, tablet, or smartphone, the system automatically adjusts its layout and interface elements to provide an optimal viewing experience without compromising functionality. Responsive tables, flexible navigation menus, and adaptive forms allow users to perform tasks such as managing events, registering participants, recording attendance, and viewing reports efficiently regardless of the device being used. This responsive implementation improves accessibility, increases user convenience, and supports the growing demand for mobile-friendly web

5.0 FEATURES AND FUNCTIONALITIES

5.1 AUTHENTICATION

The authentication feature ensures that only authorised users can access the administration system. Users are required to log in using a valid username and password before accessing any system functions. The system also uses role-based access, allowing only administrators or super administrators to manage events, participants, and attendance records. This feature helps protect the system from unauthorised access and keeps the data secure.

5.2 EVENT CRUD

The Event CRUD feature allows administrators to manage event information easily. Administrators can create new events by entering details such as the event name, venue, date, and time. Existing event records can also be updated when changes are required or deleted if the event is no longer needed. This makes event management more organised and efficient.

5.3 PARTICIPANT REGISTRATION

The participant registration feature allows users to register for library events through a public registration link. After an event is created, the system automatically generates a unique registration link that can be shared with participants. Users simply complete the online registration form, and their information is stored directly in the database without requiring manual data entry.

5.4 PARTICIPANT CRUD

This feature enables administrators to manage participant information after registration. Administrators can view the list of registered participants, update incorrect information, or delete invalid or duplicate records. This helps maintain accurate participant data and ensures that the registration list remains organised.

5.5 SEARCH AND FILTER

The search and filter feature helps administrators quickly find specific records in the system. Users can search using keywords such as event names or participant names and apply filters to display only the required information. This feature saves time and makes it easier to manage large numbers of records.

5.6 ATTENDANCE

The attendance feature allows administrators to record participant attendance during an event. Each participant can be marked as **Present** or **Absent** with a single click. The attendance status is updated immediately, making it easier to monitor participation and prepare accurate attendance records.

5.7 PDF EXPORT

The PDF export feature enables administrators to generate attendance reports in PDF format. Once an event is completed, the attendance list can be exported and downloaded for documentation or printing purposes. This feature provides a professional report that can be shared or stored for future reference.

5.8 RESPONSIVE USER INTERFACE

The system is designed using Bootstrap 5 to provide a responsive and user-friendly interface. The layout automatically adjusts to different screen sizes, allowing users to access the system comfortably using desktop computers, laptops, tablets, or smartphones. This ensures that all system functions remain easy to use regardless of the device.

5.9 SECURITY

The security feature helps protect the system and user data from common web security threats. LERS uses CSRF protection and secure HTTP headers to prevent unauthorised requests and improve application security. These security measures help ensure that user information and system data remain safe during daily operations.

6.0 CURD WORKFLOW

Step 1: Administrator Logs In

The workflow begins when the administrator logs into the system using a valid username and password. After successful authentication, the administrator is directed to the dashboard where all system features can be accessed. This login process ensures that only authorised users are allowed to manage the system.

Step 2: Create a New Event

The administrator creates a new library event by entering the required information, such as the event name, venue, date, time, maximum number of participants, registration closing date, and event status. After all information is completed, the administrator saves the event, and the details are stored in the database.

Step 3: Generate Registration Link

Once the event has been created, the system automatically generates a unique registration token and a public registration URL. This link is used by participants to register for the event and can be shared through email, social media, or other communication platforms.

Step 4: Participant Registration

Participants open the registration link using any web browser and complete the online registration form by entering their personal information, such as name, student or staff ID, email address, and phone number. After submitting the form, the registration details are saved automatically in the system database.

Step 5: View Registered Participants

The administrator can open the participant list for a selected event to monitor registrations. The system displays all registered participants together with their information, making it easy to check the number of registrations and manage participant records.

Step 6: Update or Delete Participant Records

If there are incorrect, incomplete, or duplicate records, the administrator can edit the participant information or remove unnecessary records. This helps keep the registration data accurate and well organised.

Step 7: Record Attendance

During the event, the administrator records participant attendance by marking each participant as **Present** or **Absent**. The attendance status is updated immediately, allowing the administrator to keep an accurate attendance record for the event.

Step 8: Export Attendance Report

After the event has finished, the administrator can export the attendance list as a PDF report. The generated report can be downloaded, printed, or stored as official documentation for future reference. This feature makes reporting faster and eliminates the need to prepare attendance records manually.

7.0 TEAM ROLES AND CONTRIBUTIONS

The successful development of the **Library Event Registration System (LERS)** was made possible through effective teamwork and collaboration among all group members. Each member was assigned specific responsibilities based on their skills and expertise to ensure that every phase of the project was completed efficiently. Regular discussions and meetings were conducted throughout the development process to share ideas, monitor progress, solve technical problems, and ensure that the project remained on schedule. This collaborative approach helped improve communication, coordination, and the overall quality of the system.

Each team member contributed to different aspects of the project, including project planning, system analysis, database design, front-end and back-end development, testing, documentation, and presentation preparation. By working together, the team successfully developed a functional web application that meets the objectives of the IMS566 course. The project also provided valuable practical experience in software development, teamwork, problem-solving, and project management, allowing members to strengthen both their technical knowledge and communication skills while completing a real-world web application.

BIL	ROLE	NAME	CONTRIBUTION
1.	Project Manager	Mohd Faizal Bin Sawardi Lukman	Coordinate project plan and presentation
2.	Backend Developer	Mohd Faizal Bin Sawardi Lukman	CodeIgniter controllers, models, database logic
3.	Frontend Developer	Muhamad Amir Izzat Bin Sudin	Bootstrap layout, forms, navigation, responsive UI
4.	Documentation Lead	Muhamad Amir Izzat Bin Sudin	Report, user manual, screenshots, reflection
5.	Tester	Mohd Faizal Bin Sawardi Lukman	Login, CRUD, search/filter, export PDF testing.

8.0 CONTACT INFORMATION (SUPPORT)

The **Contact Information (Support)** section provides users with the necessary details to obtain assistance when they experience technical issues or require additional information about the **Library Event Registration System (LERS)**. A designated support contact, such as the project manager or system administrator, is responsible for handling enquiries related to system access, event management, participant registration, report generation, and other operational matters. Providing clear contact information allows users to seek help quickly and ensures that issues can be resolved efficiently.

Users are encouraged to contact the support team through the official communication channels, such as email or telephone, whenever they encounter problems while using the system. The support team will respond to enquiries, provide troubleshooting guidance, and assist users in resolving system-related issues. Having a dedicated support contact improves user confidence, enhances the overall user experience, and helps ensure that the system operates smoothly and effectively throughout its use.

Email: 2023717417@student.uitm.edu.my

General enquiries and overall system support.

9.0 CONCLUSION AND REFLECTION

The **Library Event Registration System (LERS)** successfully demonstrates the development of a complete web-based application that supports the management of library event registrations and participant attendance. The system was developed using **CodeIgniter 4**, **MySQL**, **Bootstrap 5**, and **DomPDF**, providing a reliable and user-friendly platform for both administrators and participants. By replacing manual registration processes with an online system, LERS improves the efficiency of event management, reduces paperwork, and enables faster access to participant information and attendance records.

The project successfully achieved the main learning objectives of the **IMS566 – Advanced Web Design Development and Content Management** course. Throughout the development process, the team implemented essential web application features such as user authentication, database management, CRUD operations, search and filtering, responsive user interface design, attendance management, and PDF report generation. These features demonstrate the practical application of web development concepts and show how different technologies can be integrated to build a functional database-driven system that meets user requirements.

From the team's perspective, this project provided valuable hands-on experience in planning, designing, developing, testing, and documenting a real-world web application. Team members improved their technical knowledge, problem-solving abilities, communication skills, and collaboration throughout the project. The experience also highlighted the importance of proper project planning, teamwork, and continuous testing in producing a high-quality system. Overall, the development of LERS has strengthened the team's understanding of modern web application development and prepared them with practical skills that can be applied in future academic projects and professional careers.

USER MANUAL LIBRARY EVENT REGISTRATION SYSTEM

1.0 LOGIN

The screenshot displays the login interface of the Library Event Registration System (LERS) for Universiti Teknologi MARA. The page has a dark purple background. At the top center is the university's logo, followed by the text 'UNIVERSITI TEKNOLOGI MARA' in orange. Below this, the title 'LIBRARY EVENT REGISTRATION SYSTEM (LERS)' is written in large, bold, white capital letters. The main content area is a white rounded rectangle with a thin orange border. Inside this rectangle, the word 'LOGIN' is centered in bold purple text. Below the title, there are two input fields: 'Username' with the value 'superadmin' and 'Password' with masked characters '.....'. A purple 'Login' button is positioned below the password field. At the bottom of the white rectangle, there is a link that says 'Back to landing page'.

- Open the LERS application URL.
- Click Login.
- Enter username and password.
- After successful login, the system opens the dashboard.

- The system downloads an attendance report PDF for that event.

8.0 LOGOUT

- Click Logout in the navigation bar.
- The session is ended and the system returns to the login page.

9.0 CREATE ADMIN

The screenshot shows the login interface of the 'LIBRARY EVENT REGISTRATION SYSTEM (LERS)' for Universiti Teknologi MARA. The page has a purple background. At the top, there is a logo and the text 'UNIVERSITI TEKNOLOGI MARA' and 'LIBRARY EVENT REGISTRATION SYSTEM (LERS)'. Below this is a white box containing the 'LOGIN' section. The 'Username' field is highlighted with a green border and contains the text 'superadmin'. The 'Password' field is highlighted with a blue border and contains a masked password '.....'. Below the password field is a purple 'Login' button. At the bottom of the white box is a link 'Back to landing page'.

- Must login using Super Admin account (Username: superadmin / password: Password123!)

The screenshot shows the 'Administration Dashboard' of the LERS system after a successful login. The top navigation bar is purple and contains the LERS logo, the text 'LERS', and navigation links: 'Dashboard', 'Users' (highlighted with a green border), 'Events', 'Participants', 'superadmin', and 'Logout'. Below the navigation bar is a green message box that says 'Login successful. Welcome, Super Admin.' with a close button. The main content area has a purple background and contains the text 'LIBRARY EVENT REGISTRATION SYSTEM' and 'Administration Dashboard'. Below this is a subtitle 'Monitor events, participant registrations, and upcoming activities in one view.' and two buttons: 'Add Event' and 'View Participants'.

- Must login using Super Admin account

USER MANAGEMENT

Manage System Accounts

Add and monitor admin accounts that can manage LERS events.
